VISION-VERSE

01

Mentees were familiarized with basic Python programming and its libraries such as NumPy, Pandas, Matplotlib

02

Image processing concepts such as Sampling, Quantization and techniques for detecting edges such as Canny Edge, Hough transform were covered

03

Image filtering techniques such as Gaussian, Median, Bilateral, Box filters and Image segmentation algorithms such as Otsu, Region growing, K-means, Watershed were introduced

04

Mentees were given weekly resources on each topic and weekly assignments were given to track the progress of learnt concepts
